

OPTOMAP

Retinal Examination

Dr. Rice and Dr. Galloway recommend the Optomap Retinal Imaging. It is a 3-D image of the back of the eye (the Retina) and is painless, non-invasive, with no side effects. This amazing technology is the best tool for the detection of many ocular diseases such as macular degeneration, glaucoma, diabetic/hypertensive retinopathies, and retinal detachments yet does not require pupil dilation (i.e. drops)! Unfortunately most insurances do not yet cover this service which is an additional \$29.

Dr. Jeffrey D. Rice

Dr. Slade S. Galloway

Please consider and initial one of the options below:

- _____ A) Yes, I would like to have the **Optomap Retinal Examination** performed without dilation.
- _____ B) No, I would not like to have the **Optomap Retinal Examination**, but would like to be dilated today.
- _____ C) No, I would not like the **Optomap Retinal Examination** performed nor would I like to have my eyes dilated today, with the understanding that my doctor will have a limited view of the retina.
